Humus in soils is invaluable for storing and supplying plants with plentiful nutrients, moisture and beneficial microorganisms.

A healthy soil has plenty of humus. Healthy soils promote healthy plants. By applying MyNoke vermicast, you instantly add humus to your soils. Incorporating our vermicast – a proven soil conditioner – into your garden will regenerate soil fertility and naturally improve plant and soil health.

Our bags can be returned, refilled, reseed and reused!

Carefully cut the stitching at the edge of the bag and pull the thread. The bag will open undamaged. Drop off the empty bags at your local collection point.

With every bag collected, MyNoke provides sponsorship to the collection partner.

If you want to participate, contact us to become a local collection partner and swap empty MyNoke bags for MyNoke vermicast.
